# TRIAGE\_WINDOWS.CMD

TO QUICKLY COLLECT PERTINENT INFORMATION FROM A  
WINDOWS SYSTEMS SUCH AS:

HOSTNAME

USER DOMAIN

EMAIL

CURRENT USER

TIMEZONE

SYSTEM MODEL

ONEDRIVE INFO

BITLOCKER ENCRYPTION STATUS (AND KEY)

SYSTEMINFO

IPCONFIG

SAM AND SYSTEM FOR PASSWORD CRACKING

# TRIAGE\_LINUX\_MAC.SH

TO QUICKLY COLLECT PERTINENT INFORMATION FROM A  
LINUX OR MAC SYSTEM:

HOSTNAME

OS

CURRENT USER

TIMEZONE

UPTIME

IFCONFIG

NETSTAT

SSH KEYS

BASH HISTORY

/ETC/SHADOW

THE UNIQ OUTPUTFILE HAS A START AND END TIMESTAMP FOR YOUR LAB RECORDS. THE OUTPUT FILE ALSO RECORDS THE COMMAND THAT WAS USED TO CAPTURE THE INFORMATION FOR POSTERITY'S SAKE. RUNNING AS ADMIN IS PREFERRED BUT NOT REQUIRED.

WHAT DO YOU  
DO FOR ONSITE  
TRIAGE?

Python is awesome:

- **Install Python:**

Download and install Python from [python.org](https://python.org).

- **Install a Package with pip:**

```
python pip install (package-name)
```

or

- **Install from requirements.txt**

```
python pip install -r requirements.txt.
```

Let AI write your code:

- Chatgpt.com or DeekSeek.com

# AI (CHATGPT)

“WRITE A PYTHON SCRIPT TO READ INPUT.TXT AND EXPORT ANY EMAIL ADDRESSES INTO EMAILS.TXT”

Here's a simple Python script that reads email addresses from `input.txt` and exports them into `emails.txt`:

python

Copy

```
import re

# Define a regular expression for matching email addresses
email_regex = r'[a-zA-Z0-9._%+-]+@[a-zA-Z0-9.-]+\.[a-zA-Z]{2,}'

# Open the input.txt file for reading
with open('input.txt', 'r') as infile:
    content = infile.read()

# Find all email addresses using the regex
emails = re.findall(email_regex, content)

# Open emails.txt file for writing and save the found emails
with open('emails.txt', 'w') as outfile:
    for email in emails:
        outfile.write(email + '\n')

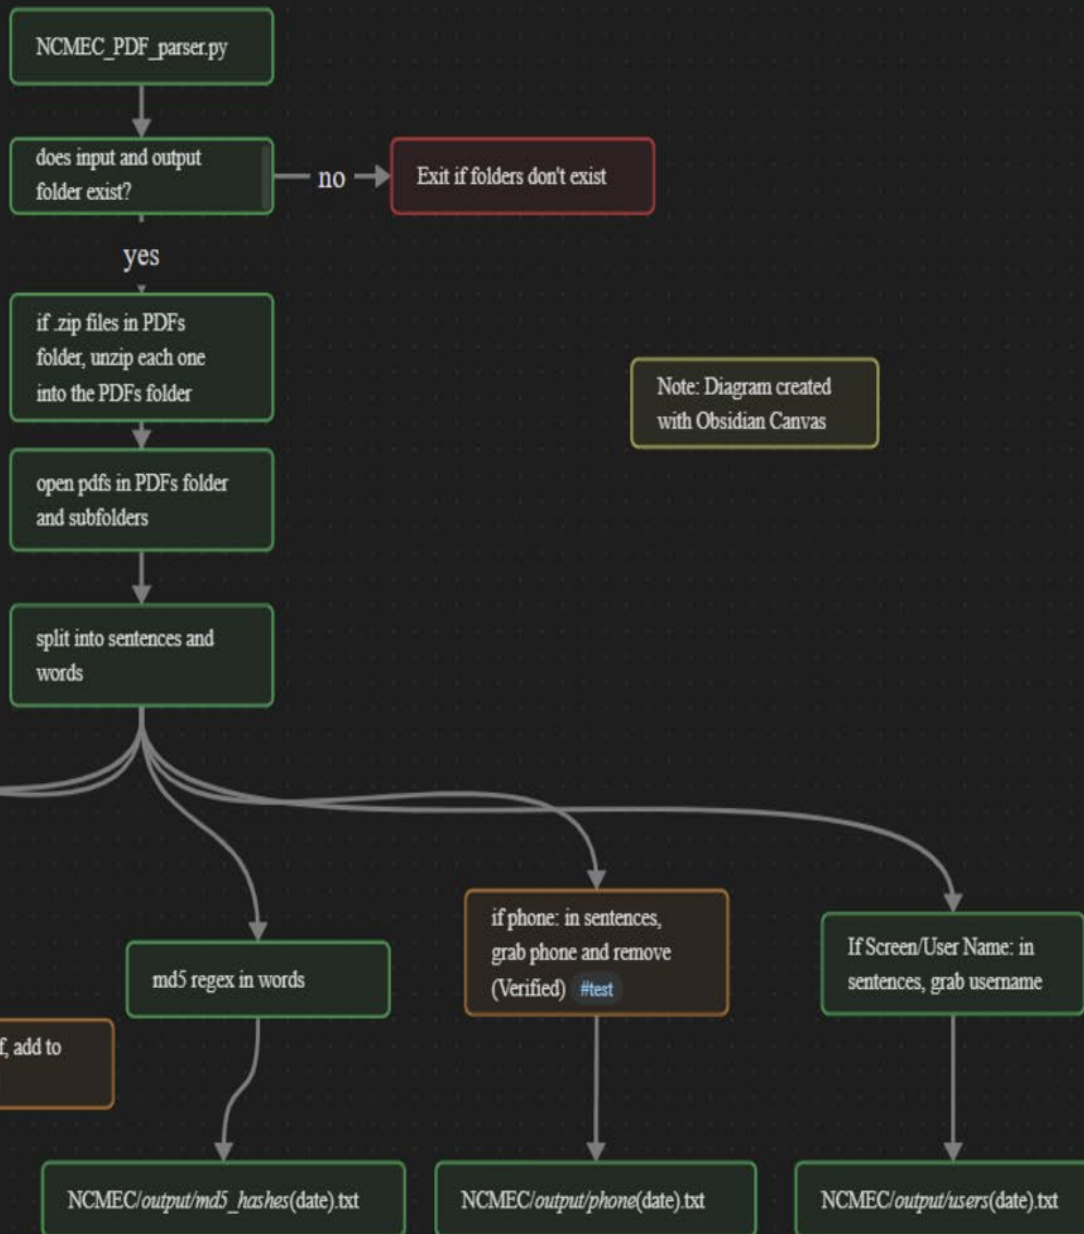

print(f"Extracted {len(emails)} email(s) and saved to emails.txt.")
```

# AI (CHATGPT)

write a python function that unzips every .zip file in the PDFs folder, including sub folders.  
Then opens each .pdf file in the "NCMEC" folder and sub folder. extract the text and tables using PyPDF2. create a list of words, split by "", <, > and ', and a list of sentences that are split by /. Create an email list that uses regex to pull out email addresses . Create an md5 list that uses regex to find all md5 hashes create an ip list that matches all IPv4 & IPv6 addresses. Create an phone list that matches all phone numbers. export each list to a text file with todays date in YYYY-MM-DD format after doing a sort / unique.

# NCMEC\_PDF\_PARSER.PY

Dump all of your NCMEC .zip or .pdf files into the NCMEC folder. it will export the emails, ip's, md5's, phone numbers and users into text files in the \_output folder

5 files unzipped in NCMEC folder

Processing PDFs in NCMEC folder....

NCMEC\1234\test1.pdf

NCMEC\2345\tes2.pdf

NCMEC\3456\test3.pdf

NCMEC\4567\test4.pdf

NCMEC\5678\test5.pdf

See text files in NCMEC\_output folder.

1 emails

14 IPs

5 MD5 hashes

1 phone numbers

3 users

# FORENSICSREPORTER.PY

Convert forensic imaging logs to xlsx, print stickers and write activity reports/  
case notes

-I # parse any of the following imaging logs:

Case#: 1931-172 Ex: 4

CaseName: Al Capone

python ForensicsReporter.py -r # print report

Activity Number:  
1931-172

Date of Activity:  
1931-11-12

## Item 13

A LGE LM-V600 Verizon phone (MSISDN: 13125551212.0) (IMEI: 3525712230469390.0) (S/N: DNPVABEZJCL9) (OS: Android 11) (Hostname: Als phone) was received on 1931-08-02. On 08/02/1931 at 14:06:48 (-5), DFE HOLMES used Cellebrite UFED 7.56.0.282 to conduct an advanced logical phone extraction.

The image (MD5 Hash: ad0234829205b9033196ba818f7a872b) was saved as EvidenceCollection.ufdx. The forensic imaging process was completed successfully and verified with no errors. The source hash was calculated and confirmed unchanged before processing. The acquisition and verification hash values matched, ensuring data integrity.

Source MD5 hash: ad0234829205b9033196ba818f7a872b

Verification MD5 hash: ad0234829205b9033196ba818f7a872b

The image was processed with Cellebrite Physical Analyzer 8.1.0.7 and further analyzed with mac\_apr.exe. The forensic image hash value was verified prior to processing thereby confirming the data remained unaltered prior to processing. "AICOPONE@gmail.com" with a password of "Password1234" was an email configured on this phone.

Al CAPONE gave Frank Wilson 193104 as the pincode to the phone. "AICAPONE@gmail.com" with a password of "193104" was an email configured on this phone. This phone contained 176 MMS (multimedia messaging service) messages between AICAPONE@gmail.com and 16185551211 (James). There were message between AICOPONE@gmail.com and accountant1492@gmail.com. Relevant files were exported. This phone was returned to the owner on 1931-10-02.

- **Simplicity & Speed:** Easy to learn and quick to write, speeding up documentation of forensic findings.
- **Clean & Readable:** Plain text format remains easy to understand, with no distractions.
- **Effective Organization:** Use links, tags, and hierarchical structures to connect and organize case information.
- **Cross-Platform:** Accessible on any device, with Obsidian syncing between locations.
- **Integrity:** Plain text files are lightweight and less prone to corruption.
- **Searchability:** Advanced search, tags, and backlinks to quickly find relevant information across cases.
- **Collaboration:** Share and collaborate on notes seamlessly, ensuring team alignment.
